FMSI PART# 4555M

8 06416 62289 4

Made in Canada

4555M

FMSI part numbers 4554M and 4555M transmission repair lines are designed to replace corroded and seized (to the tube) original equipment Ford quick connectors. This style of Transmission line repair is used on rad cooler, external cooler and filter lines found on many Ford trucks and SUV's dating back to 2007.

To install remove one pressure or return line (do not remove both lines from the rad cooler at the same time as this will allow the inner rad cooler tank to shift and drop below the inlet and outlet transmission line ports) thread new brass 4554M 1/2" or 4555M 3/8" fitting into the inlet or outlet port. The included cupro/nickel tubing (with 90° bend) can now be tightened into the compression union side of the (4554M,4555M) brass fitting. Using the provided 360° seal 1/2" compression union connect to the original steel tube at a place where it was cut to ease the removal of the original equipment quick connector.

APPLICATIONS:

4554M 1/2" repair line - F150, F250, F350, Escape, Flex, Edge

4555M 3/8" repair line - F150 (2010 and older) etc.
